

Complete Notes On

Data Base

Management System

Index

Sr. No	chapter Name	Page No.
1.	Introduction to databases	
	1.1 Basic concepts of databases	5-11
	1.2 Database management system architecture	
	1.3 Data Models	
	1.4 Advantages and disadvantages of using databases.	
2.	Entity-Relationship (ER) model	
	2.1 Entities, attributes and relationships	12-22
	2.2 Entity-Relationship diagrams (ERDs)	
	2.3 Cardinality and participation constraints	
	2.4 keys in ER model	
3.	Relational data Model	
	3.1 Relational schema	23-26
	3.2 Relational Algebra	
	3.3 Tuple and domain relational calculus	
	3.4 SQL basics	
4.	Normalization	
	4.1 Functional dependencies	27-31
	4.2 First, second and Third Normal Forms	

Sr.No	chapter Name	Page
	4.3 Boyce-codd Normal Forms	
	4.4 Multivalued dependencies	
5.	Query optimization and Execution	
	5.1 Query processing and parsing	
	5.2 Query optimization techniques	32-33
	5.3 Indexing and hashing	
	5.4 Execution plans and cost estimation	
6.	Transaction and concurrency control	
	6.1 ACID properties of transactions	35-36
	6.2 schedules and serializability	
	6.3 Concurrency control techniques	
	6.4 Deadlocks and their prevention.	
7.	Crash Recovery and Backup	
	7.1 Recovery Techniques (undo, Redo, logging)	39-42
	7.2 Recovery manager and buffer management	
	7.3 Backup and restore procedures	
8.	Database Security and Authorization	
	8.1 security threats and countermeasures	43-45
	8.2 User authentication and authorization	
	8.3 Access control and privileges
